

Medicalis selected by 4 Hospitals Groups

Kitchener, Ontario, Canada – September 19, 2008

Medicalis[®] Corporation, a leading provider of Clinical Decision Support for Diagnostic Imaging (CDS-DI) solutions, today announced that it has been selected by four leading hospital organizations in Minnesota. Medicalis will assist Gillette Children's Healthcare Network, Meeker Memorial Hospital, St. Michael's Hospital Network and Falls Memorial to deliver services to their physicians to assist with ordering diagnostic tests. This alleviates the need for physicians to make lengthy calls to Radiology Benefits Management companies before ordering advanced diagnostic procedures.

Continuous advances in diagnostic imaging procedures such as CT, MR and PET, have made it increasingly difficult for physicians to stay current with changing best practices. This has led to an environment where 7-10% of diagnostic imaging procedures ordered are unhelpful or alternatives should be considered. This has often lead to Health Plans requiring arduous phone pre-notification programs. In Minnesota, leading Health Plans have approved Medicalis' Decision Support solutions to help convey best practices to physicians at the point of Service and at the point of care, eliminating the need for such phone pre-notification programs. Medicalis' solutions provides immediate feedback to physicians only if and when there are alternative tests they should be considering for the current patient condition.

Medicalis' Decision Support solutions are designed to plug into web portals, EMRs and CPOEs using advanced Web-Services to seamlessly delivery clinically supportive advice while a physician is ordering a test. The physician's experience is similar to prescription-drug databases currently embedded into the ordering workflow of EMRs. Physicians place diagnostic imaging orders in the same way that they always have and only if there are alternative tests to consider, the EMR will seamlessly present these options. This process delivers the evidence-based practices from leading diagnostic imaging and imaging sources while the physician is considering tests for their patient. The seamless experience eliminates the interruption required to reference text books or online websites.

Medicals Analytics with report outcomes provides physicians with important feedback on the outcomes of their diagnostic imaging procedures. When coupled with Medicalis Decision Support , it provides previously unattainable feedback to physicians about the efficacy of their diagnostic imaging ordering to diagnose their patients. This combination of providing advanced clinical feedback from published guidelines as well as from physician's own exam outcomes delivers the ongoing information physicians need to make better decisions for their patients.

About Medicalis Corporation

Medicalis is a leading provider of healthcare information technology and Clinical Decision Support for diagnostic imaging. Medicalis delivers web-

based clinical and integration services to physicians, providers and health plans to provide advanced diagnostic imaging solutions that improve quality and efficiency of diagnostic services. Medicalis delivers solutions that provide clinical guidelines for use at the point-of-care, point-of-service and point-of-analysis that address the issues of unnecessary testing, resource utilization and patient safety.
