

## Medicalis Announces: Product Release and Commercial Availability of its Medicalis Decision Support Server™

Kitchener, Ontario, Canada Nov 13, 2008

Medicalis® Corporation, a leading provider of Clinical Decision Support for Diagnostic Imaging, today announced the commercial release and general availability of its **Medicalis Decision Support Server™** product. Medicalis reduces inappropriate imaging through their unique delivery of evidence based imaging guidelines to physicians using patented clinical decision support technology.

"Our industry needs a workable, imaging specific, and physician friendly solution to assist in managing the unprecedented growth in imaging volumes. Decision Support Server is that solution," said, Ron Kelly President and CEO of Medicalis.

**Medicalis Decision Support Server™** plugs into your current EMR and CPOE systems, making the delivery of Clinical Decision Support for Diagnostic Imaging to the ordering physician simple and seamless. Physicians continue to use their current system to order tests as usual, and only interact with Medicalis advice alerts when the requested procedure is deemed potentially inappropriate based on Medicalis' evidence based clinical content.

Medicalis decision support is available to customers through a number of currently available ordering systems including: Epic, Cerner, and Nightingale.

### KEY BENEFITS

**Physician groups** who have entered into capitated contracts with insurance plans must manage the risk and cost of care for each patient. Reducing unnecessary imaging is a key strategy to managing cost while still providing high quality patient care.

**Imaging providers** who are being denied claims from insurance plans due to inappropriate imaging can avoid claim denials by assuring their referral base is ordering appropriate procedures. Also delays caused by an RBM interventional process can negatively impact patient care. Medicalis evidence based clinical content is delivered at the point-of-care; it meets the criteria of many insurance plans, and is part of an alternative solution to an RBM.

**Insurance plans** reduce unnecessary imaging by delivering evidence based guidelines directly to physicians. Use Medicalis technology to implement as part of an alternative system to current RBM programs, at a lower operational cost, with similar effect.

### KEY FEATURES

**Detailed, Actionable Advice.** Medicalis Clinical Content is a set of encoded guidelines that improve the chance of a relevant diagnosis, and increase the usefulness of each result.

**Leverage Your Existing IT Investments.** The Decision Assist™ SDK delivers clinical and fiscal order validation to EMR and CPOE systems.

**Stay Current with the Latest Research.** New guidelines are being created at an increasing rate. Medicalis Decision Support Server brings the latest clinical content to physicians through Automatic Content Updates.

**Understand and Manage Radiation Dose.** Medicalis content provides the estimated effective radiation dose for each requested and suggested alternative procedures.

**Content Transparency.** Through the Medicalis Content Collaboration Wiki, members can review and understand Medicalis' Universal Standard of Care, while documenting and incorporating local standards of care in a narrative and interactive format.

## **About Medicalis Corporation**

Medicalis is a leading provider of healthcare information technology and Clinical Decision Support for diagnostic imaging. Medicalis delivers web-based clinical and integration services to physicians, providers and health plans to provide advanced diagnostic imaging solutions that improve the quality and efficiency of diagnostic services. Medicalis delivers solutions that provide clinical guidelines for use at the point-of-care, point-of-service and point-of-analysis that address the issues of unnecessary testing, resource utilization and patient safety.
